INFICRYL 630

INFICRYL 630- is an excellent low foaming acrylic dispersant for all water based systems. It is a light coloured dispersant in a solution form having excellent dispersing activity on basic fillers and reactive pigments in aqueous system. Specially recommended for systems, which contain dispersions of inorganic solids like Titanium Dioxide and extenders. It shows remarkable performance in various formulations where reactive pigments like Zinc oxide / Basic lead Silicate are used and also improves the stability of such systems. Properties:

- Appearance : Clear, Pale Yellow Liquid.

- Polymer Type : Acrylic

- PH : 8.5-11

- Solid Content : 30+/-1

- Viscosity : 2 to 9 Poise

Application :

Low foaming dispersion for inorganic pigments and clay and slurry for paints and paper coating. **INFICRYL 630** can be used as low foaming dispersion in all water based systems. Storage :

Store in sealed containers in dry conditions at temperature between 15-30°C, away from direct sunlight, dust, heat and moisture. Containers once opened should be close tightly to prevent contamination. Packing :

220 Kg HDPE Drums and 50 Kg HDPE Carboys.
